#### Case Study

# Project Wrong-way driving detection

#### Summary

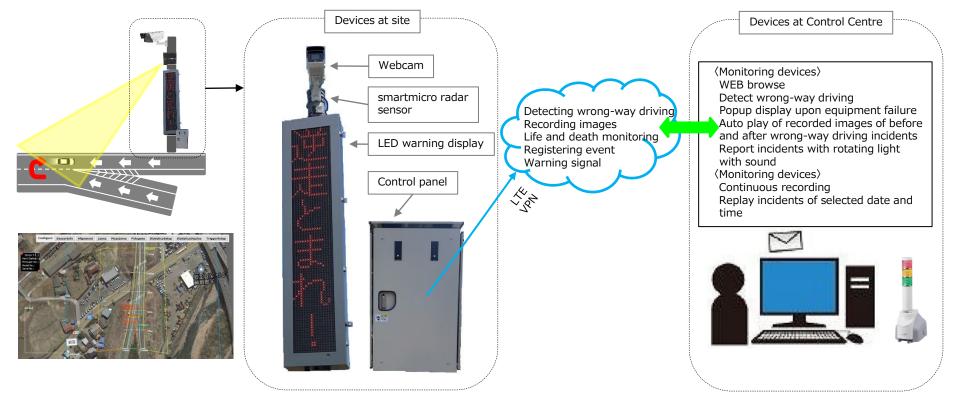

- This project is based upon the motto 'Zero tolerance of accident caused by wrong-way driving 2020' initiated by MLIT\* made public offering to private sector.
- Thema II 'The technology which detect wrong-way driving violation at the roadside and collect its data' Three companies are selected.
- Aiming for practical application of wrong-way driving countermeasure technology installing at IC junctions and approach of SA and PA on Expressways, set up equipment preferentially to verify and evaluate the technology at several violation points.
- The component of devices at sites is smartmicro traffic radar sensor, LED warning display, webcam and control panel. Wrong-way drivers will be warned by LED display upon violation and simultaneously warning signal will be sent and images of before and after violation will be popped up and recorded at Traffic Control Centre through control panel network.

\*MLIT: Ministry of Land, Infrastructure, Transport and Tourism

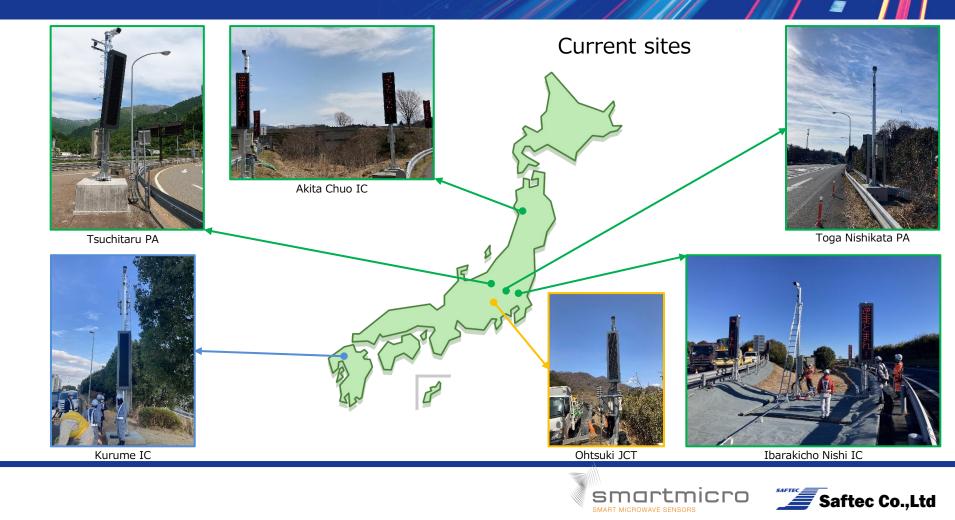

#### System configuration

smartmicro

SMART MICROWAVE SENSORS

Installation site 1 Chuo Highway, Ohtsur, JCT in ramanashi prefecture 35.601174, 138.918004

Place of a radar sensor, a LED and a camera

mLine

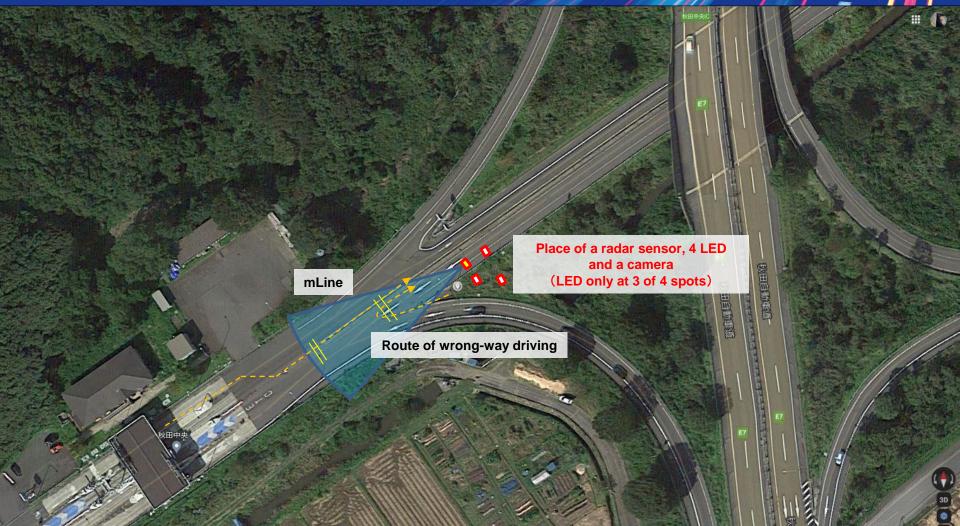

Route of wrong-way driving

Installation site 1 Chuo Highway, Ohtsuki JCT in Yamanash prefecture 35.601174, 138.918004

Installation site 2 Akita Chuo IC in Akita-prefecture 39.721600, 140.180380

Installation site 2 Akita Chuo IC in Akita-prefecture 39.721600, 140.180380

This project 'Zero tolerance of accident caused by wrong-way driving' was launched in 2020 starting from just one site. Now we are deploying at six sites among key region in Japan from North to South, and expected to be expanded.

Since then the data is being evaluated by the system and is occasionally checked.

It is still too soon to tell for the final results but the detection has never been failed, so we are aiming for the 100% achievement.

smartmicro's traffic sensors were easily installed, and offer a reliable detection solution.
