# CYBER-SHERIFF

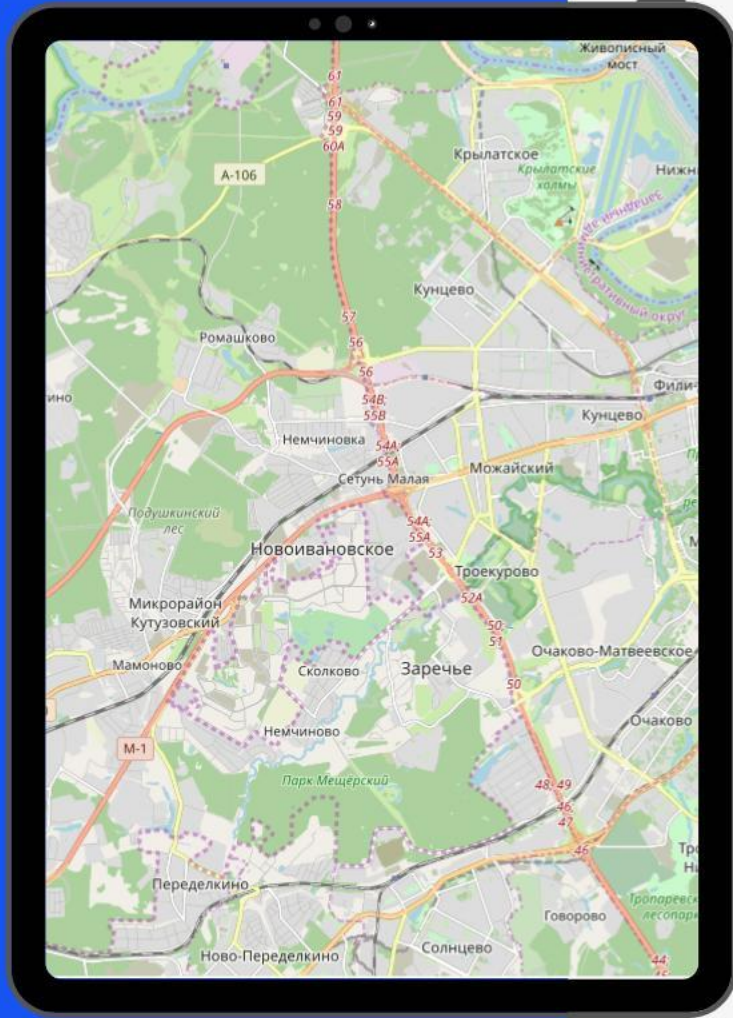

**The on board hardware and software complex «CYBER-SHERIFF» is designed for measuring the speed of vehicles in the automatic mode of operation in control zone**

**The speed of all passing by vehicles  
is measured using a radar  
UMRR-11 Type 132 which is  
built into the light bar**

We marked the map for getting speedy regime mode of operations, the location of stationary cameras and parking places automatically to the complex.

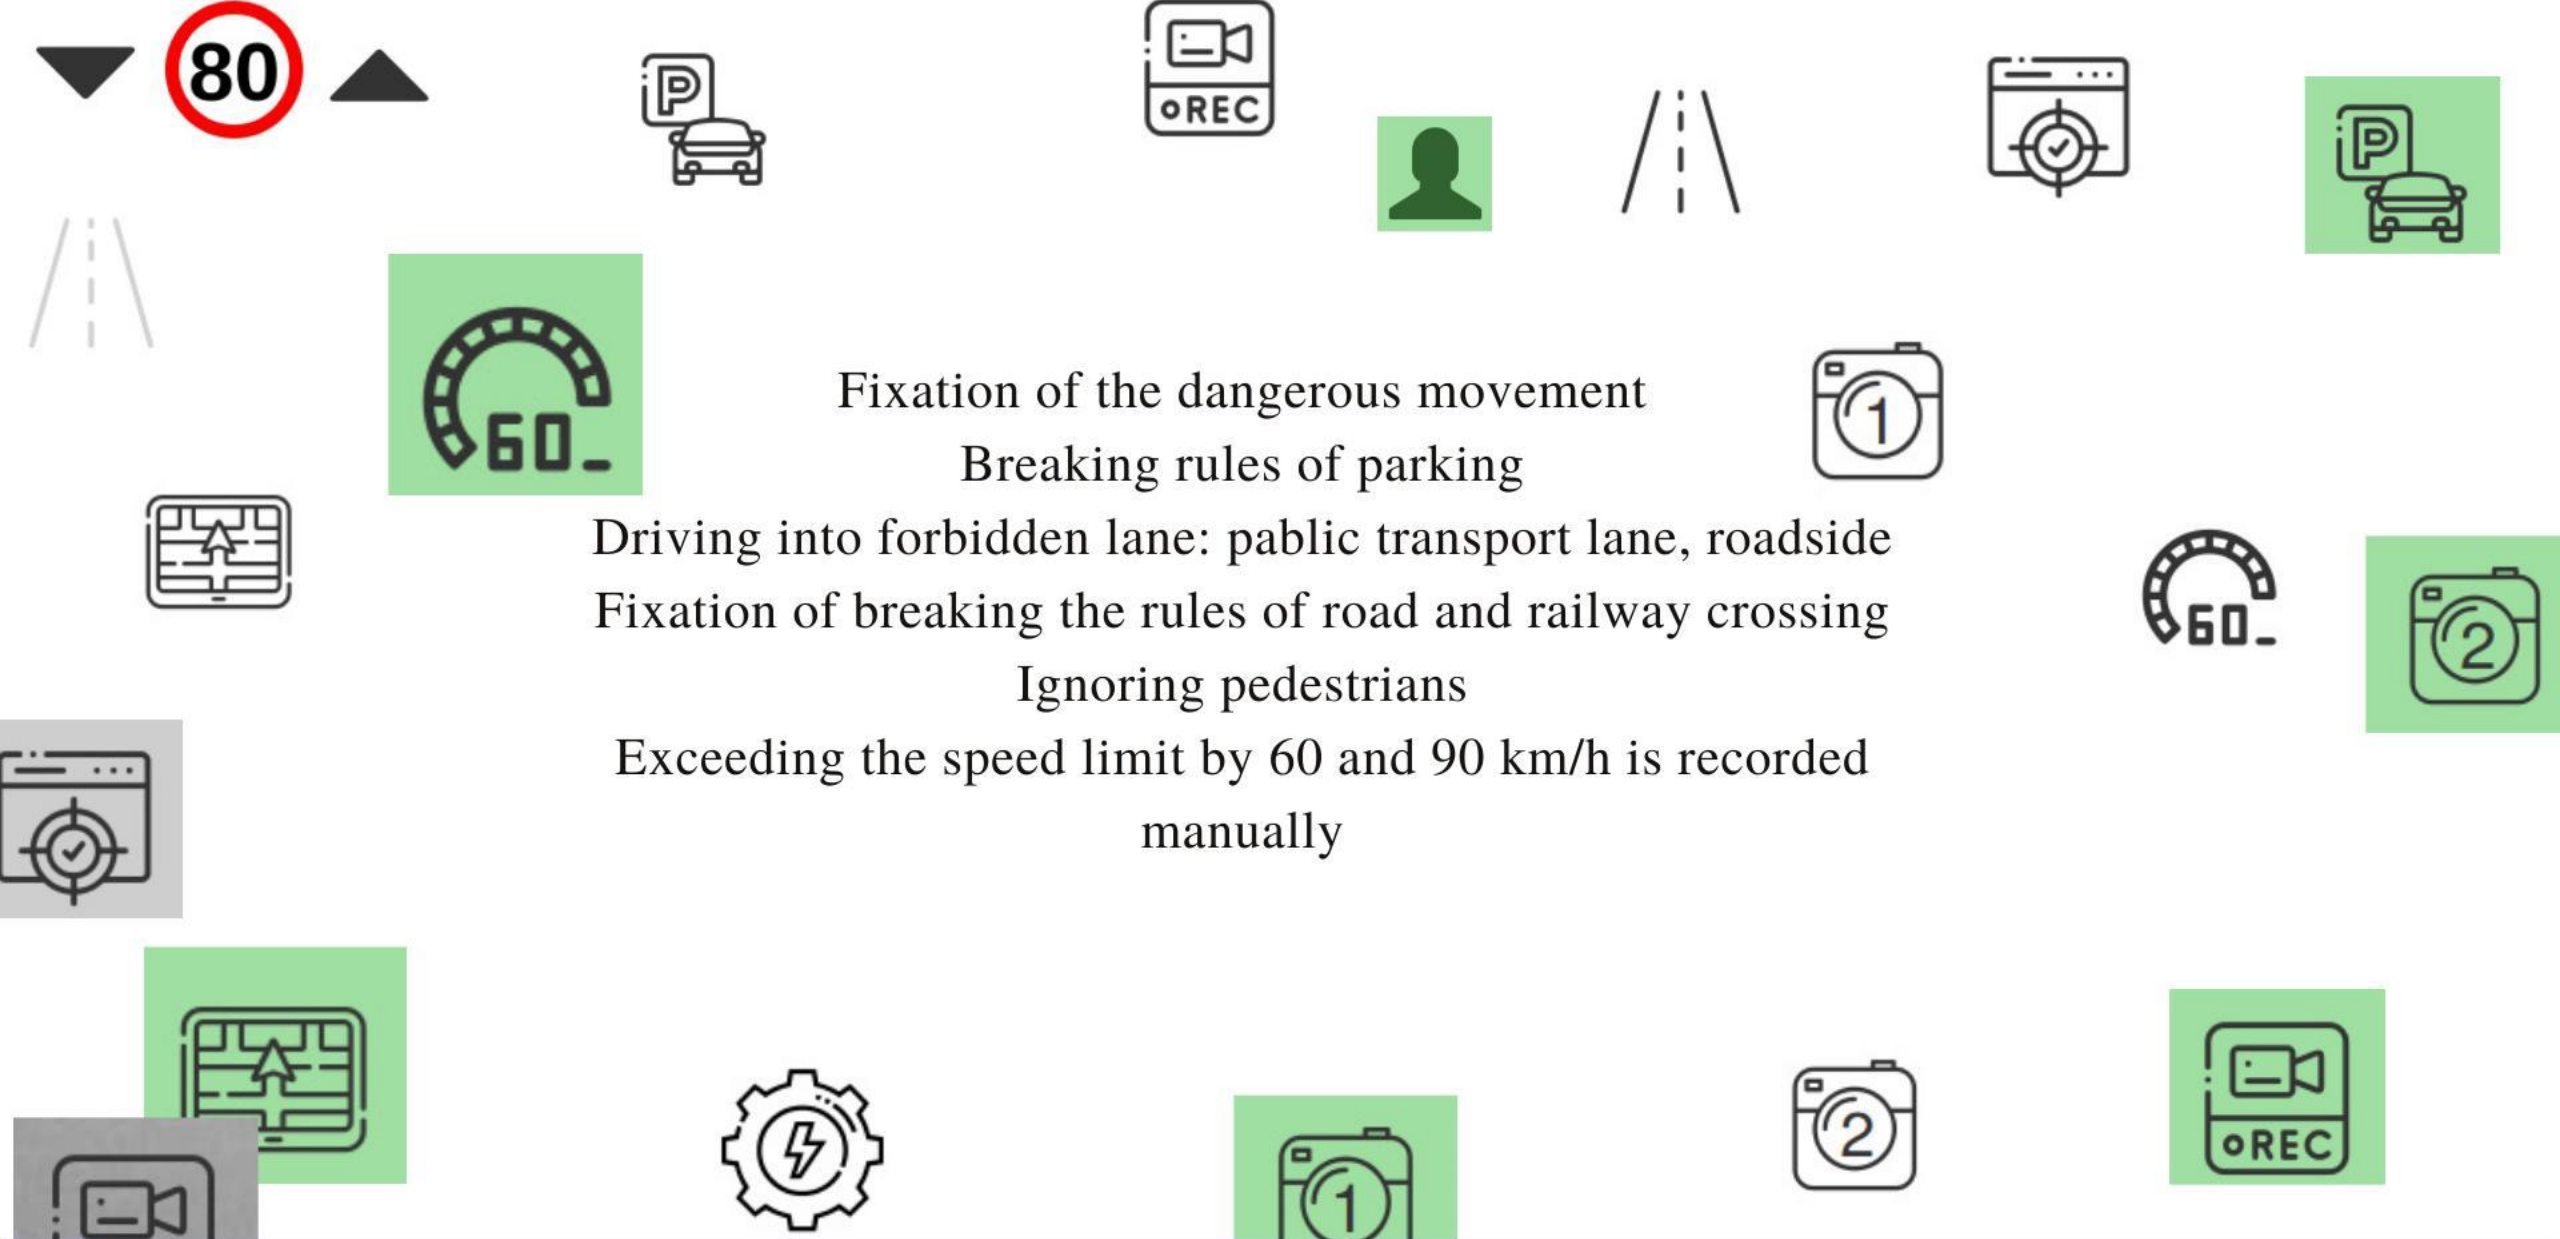

The speed limit is set manually in the interface where the map is not marked yet.

# Cyber-Sheriff is multifunctional product:

- it is a measuring instrument: it measures the speed of passing by vehicles both in motion and in a stationary position;
- the device identifies license plates in three lanes minimum;
- side cameras and camera in the cabinet of the car identify faces;
- it can also operate with various searching bases;
- it can be used as the system of positioning itself.

Fixation of the dangerous movement

Breaking rules of parking

Driving into forbidden lane: public transport lane, roadside

Fixation of breaking the rules of road and railway crossing

Ignoring pedestrians

Exceeding the speed limit by 60 and 90 km/h is recorded manually

**All information is accumulated and stored using specialized software. Using this, you can search for a vehicle and form protocols on an administrative violation in the field of road traffic**

# Thank you!
